Front End Developer

Your Mission:

Decodata is expanding and looking for a front-end developer with experience in product design. As the shift from offline furniture purchases to online purchases is accelerating, we make furniture data (i.e. specifications, purchase prices and images) from all sorts of furniture brands available to (online) retailers through our SaaS platform. This allows retailers to process new products and update collections for their customers in a matter of minutes, instead of the usual months of manual work. This results in growth in revenue, while saving costs.

As our front-end developer you will be leading in bringing our front-end, which we call our portal, to the next level. Next to awesome Vue.js skills you love pixels and have an eye for design and interaction. You will work in close collaboration with our product owner and software engineer. We are a growing, but ambitious, start-up so there's lots of room for growth; it would be super cool if you want to grow in (user) design and interaction. You will be responsible for the front-end stack.

Our company has adopted the 'working backwards' methodology from Amazon, which creates clarity for everyone involved. By creating a Press Release (PR) with content and features that are validated by the market, our customers and our team. We only build things that truly matter and prioritize accordingly. This way of working drives innovation week after week and keeps us extremely agile to stay focused on the next milestone.

You are bringing the following:

- Worked in (B2B) SaaS organisations before.
- Fluent in Vue.js.
- Know your way around JavaScript, TypeScript, HTML and CSS.
- Experience with building B2B SaaS interfaces.
- Take part in validation and exploration with customers and prospects.
- Eager to learn new technologies and product design & interaction.
- You're not afraid to step out of your comfort zone.
- Set-up automated testing.
- Create responsive web designs.
- Pre: a background in furniture and/or online retail.

About our product and tech stack

We like to keep it light and blazingly fast! Our tech stack runs entirely on Amazon Web Services. Below you will find a list of our main components.

- Product Metrics: Google Tag Manager, Hotjar, Amplitude
- Design tool: Figma
- Main frontend framework: Vue.js
- Main backend language: Python
- Amazon Web Services:
 - API Gateway
 - Amplify

Hiring organization

Decodata

Employment Type

Full-time, Part-time

Industry

SaaS

Job Location

Laan van Kronenburg 14, 1183AS,
Amstelveen
Remote work possible

Date posted

17 November 2022

- Lambda

- S3/Cloudfront

What you can expect from us

- The job is available for 24 to 40 hours per week.
- You will have the opportunity to grow our company into a full-fledged leader in this new and dynamic niche.
- A competitive salary and resources to develop yourself.
- Our company, investors and advisory board have a healthy gender balance.
- We all work hybrid. We value a good balance between working from home and having fun in the office. Did I mention a football table and get-togethers?
- As a start-up, we get things done as a team, working together is key.

About us

Decodata is the first furniture data-management solution. At Decodata we understand the world of furniture products. From first-hand experience, we know how challenging the processing and managing of existing and new collections can be. Therefore, we developed a solution that automates most of the current manual labor. We love data, we fill our data lake with furniture product specifications and images. Our mission: Disrupt by creating structure..
